Harness the full power of your measurement data and get fast, clear insight into network and device performance

Customizable multi-graph window lets you rapidly select measurements for detailed analysis.

Test to industry standards or customize masks and limits.

Evaluate TE, cTE, dTE, PDV, TIE, MTIE, TDEV, MATIE, MAFE, FPP, FFO and many more ITU-T metrics.

Analyze PTP, 1PPS, ToD and Frequency.

Apply filtering to view jitter, wander and constant components of time error.

Clear Pass/Fail indication.

Pre-configured test environments to compare results against industry standard masks and limits.

Generate and download, or export, graphical reports.

Powerful zoom for enhanced insight into data.

Intuitive, easy to learn user interface.

Live measurements from Paragon can be viewed in PFV. You can also import stored measurement data from Paragon, Sentinel or Sentry then simply drag and drop into PFV to view.
